TECHNICAL SKILLS

- NODE.JS
- EXPRESS.JS
- MONGODB
- NETWORKING
- TAILWIND
- REACT.JS
- CSS
- HTML
- JAVASCRIPT

PERSONAL PROJECTS

1. NoteBook application -

- Developed a note-taking application with full CRUD functionality using Node.js, Express, and MongoDB.
- Implemented user authentication and authorization using bcrypt, JWT tokens, and cookie-parser for secure access.
- Designed intuitive front-end interfaces with EJS templates for efficient note management.
- Optimized backend operations for seamless data storage and retrieval, enhancing overall performance.

2. MovieSite

- Integrated IMDb API in a React Application: Implemented API calls to fetch and display movie data, enhancing the application's functionality and providing users with a dynamic database of movie information.
- State Management with useState and useEffect: Leveraged React hooks like useState and useEffect to manage component state and lifecycle, ensuring efficient and responsive data handling in real-time.
- Global State Management with Context API: Utilized Context API for managing global state, enabling seamless data sharing across components and improving code maintainability and scalability.
- Enhanced User Experience with Dynamic Data Handling: Designed dynamic data fetching and rendering strategies, resulting in a responsive and intuitive user interface that updates in real-time based on user interactions, significantly boosting user engagement and satisfaction.
